Core Skills

- Go
- JavaScript
- MongoDB
- PostgreSQL
- Kubernetes
- Docker
- CI/CD
- gRPC
- GraphQL
- Grafana Loki
- MinIO
- IPFS
- Code Generation Tooling
- Linux
- DevOps
- AWS
- GCP
- AZURE
- Yandex cloud

Professional Profile

Accomplished Go backend developer with over four years of experience in designing and implementing scalable systems. Proficient in MongoDB, PostgreSQL, and Kubernetes, with expertise in microservices architecture and API development using gRPC and GraphQL. Experienced in building secure internal banking systems with governmental integrations. Skilled in DevOps practices, including containerization, CI/CD pipelines, and system monitoring with tools like Grafana Loki. Passionate about writing clean, maintainable code and automating development workflows.

Career Summary

Gexabyte, Almaty

Golang Backend Developer

August 2024 – Present

- Developed a blockchain-based backend using Ethereum Go library, integrating smart contracts on the Sepolia network.
- Implemented decentralized image storage with IPFS via Pinata and off-chain storage with MinIO.
- Optimized PostgreSQL database for secure and efficient data management.
- Collaborated with product teams to deliver scalable technical solutions.

Assigned to Zaman-Bank project through RedMadRobot (Nov 2024 – Present):

– **Retail Platform Team** (Nov 2024 – Dec 2024):

- * Contributed to the core library of an internal banking system with multiple governmental integrations.
- * Developed microservices to support banking operations and ensure system scalability.
- * Implemented log monitoring in Kubernetes to enhance system observability.
- * Designed secret error case handling with numerical error identification for precise debugging.

– **SME Platform Team** (Jan 2025 – Present):

- * Created a bridge service to facilitate governmental integrations for the internal banking system.
- * Enhanced the core library with reusable components for SME banking operations.
- * Developed code generation tooling using templates to automate boilerplate code creation.
- * Streamlined internal code management and development workflows.

Union Strategies, Toronto

Golang Backend Developer

February 2023 – July 2024

- Developed microservices for a union management system using Go, PostgreSQL, and gRPC.
- Enhanced system observability with Grafana Loki for improved monitoring.
- Collaborated with product teams to implement feature enhancements and optimize performance.

mvp14, Astana

Golang Backend Developer

February 2023 – June 2023

- Developed a CRM system for construction workers using Golang, PostgreSQL, and GraphQL.
- Implemented user management, task management, QR code scanning, picture confirmation, subtask management, and employee monitoring.
- Enabled workers to scan QR codes for task location verification and capture completion proof.
- Implemented subtask management for complex tasks and employee performance monitoring.

BilimX, Pavlodar

Golang Backend Developer

November 2022 – February 2023

- Created an edtech platform for schools using Golang and PostgreSQL.
- Provided accessible 3D models, study plans, and detailed descriptions for subjects like anatomy and physics.
- Implemented secure session management, allowing only one session per user within the school's territory.
- Developed a licensing system to prevent unauthorized access.

WeLoveFlutterFlow, Astana

Golang Backend Developer

June 2021 – October 2022

- Built a CRM platform using Golang and PostgreSQL.
- Developed RESTful API, task tracking, and role-based visibility features.
- Managed access for developers, managers, and DevOps engineers.
- Implemented customizable layers for task and project visibility.
- Created an efficient project management and collaboration solution.
